Akagera National Park – Park Size

Pre-1994: 740 000 acres
Akagera and the associated
Mutara hunting concession

Post-1994: 247 000 acres
Following the genocide and
the return of many exiles

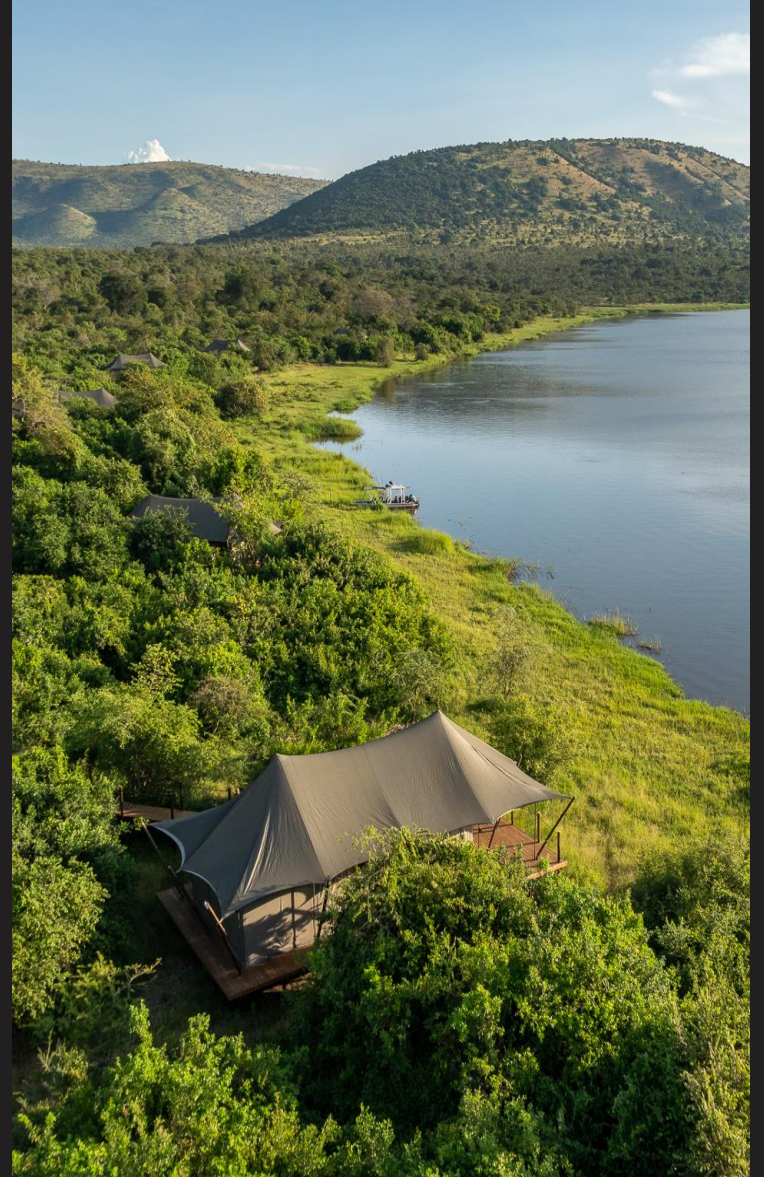

2 major regions / 10 habitat
& topography types

West = dry land, mountain,
montane, underberg

East = wetland, riverine,
lake and river.

WILDERNESS

WILDERNESS

Leopard LF – C
First Seen: 15 December 2018

ADDITIONAL COMMENTS:
Female seen fairly regular on Mhindi Peninsula. She has been seen multiple times with LM – A and LM – B. It is not clear to us if she is a sibling of the two males, or if she is their mother.

FRONT ON:
Facial spot pattern: 2 : 2

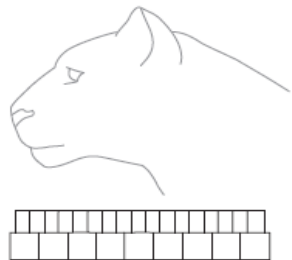

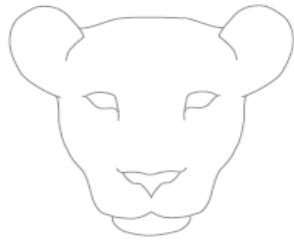

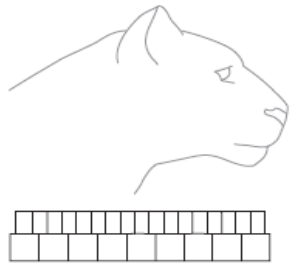

LEFT FLANK:
Downward triangle rosette

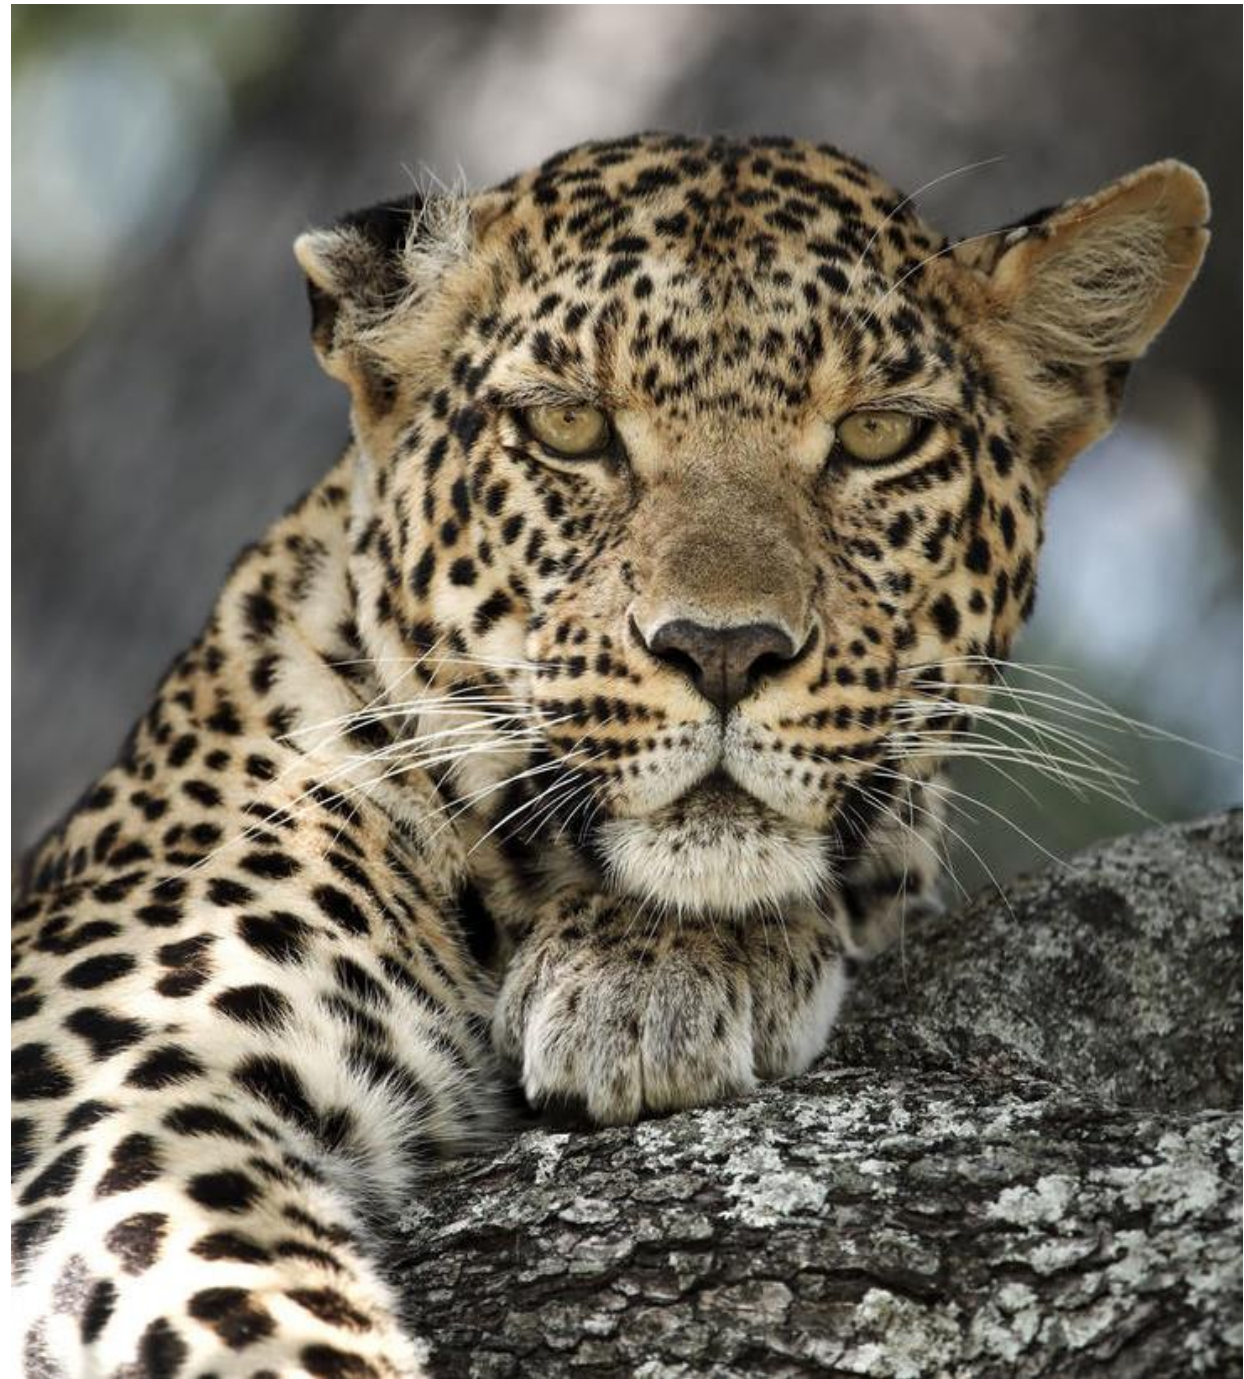

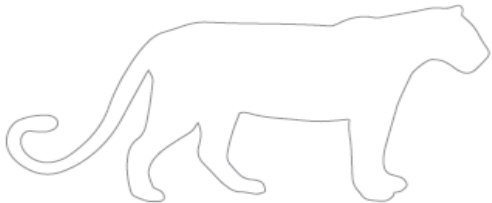

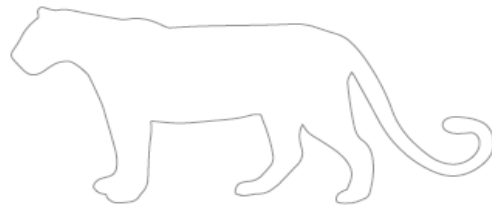

RIGHT FLANK:
No clear info

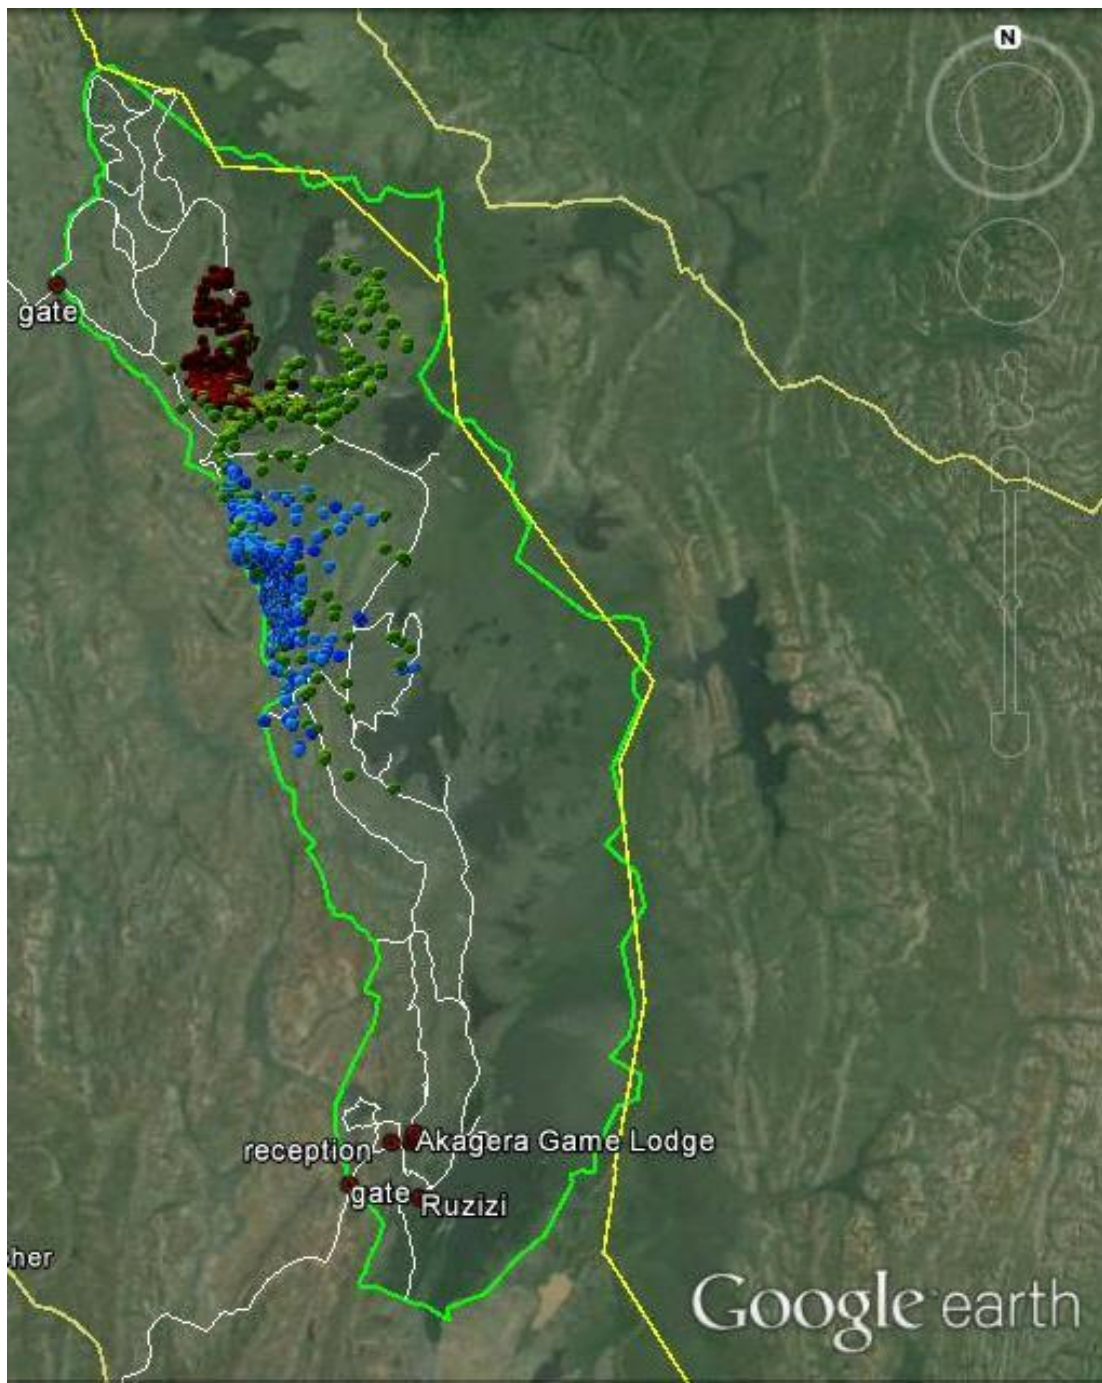

NEW LEOPARD RECORDED:

Additional Comments:

M9 – 2nd collared male

Pride: Magashi Male Coalition (3)
Born: Mutumba Plateau, Akagera NP, Rwanda, March 2016
Parentage: Mother – F3 (Kazi; Central Pride); Father – M1 (Ntwari) ... suspected
Offspring: April 2019 ... possible partial sire for F9 litter
Sept 2019 ... possible partial sire for F8 litter

ADDITIONAL COMMENTS:
Appeared on Magashi Peninsula with his 2 male litter mates in late 2018 and almost immediately demonstrated dominance and territoriality with largely permanent residence, until wandering from late 2019 once all females had given birth.

FRONT ON:
• 1 whisker spot on right, 2 left / ear notch at 1 on L
• Most notable feature –in early 2020 –is the Mohican nature of his mane and the presence of a collar

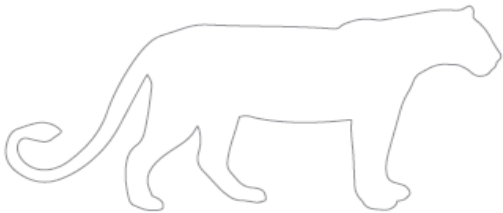

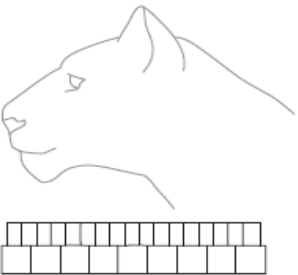

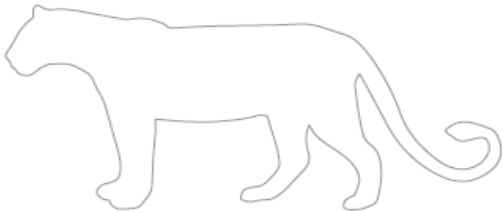

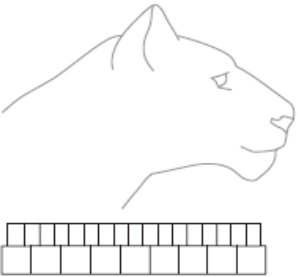

RIGHT SIDE:
• Potentially just 1 whisker spot
• Positioned halfway

LEFT SIDE:
• 2 whisker spots ... one far back
• Very widely spaced on the same level
• V-shaped notch at 1 in left ear

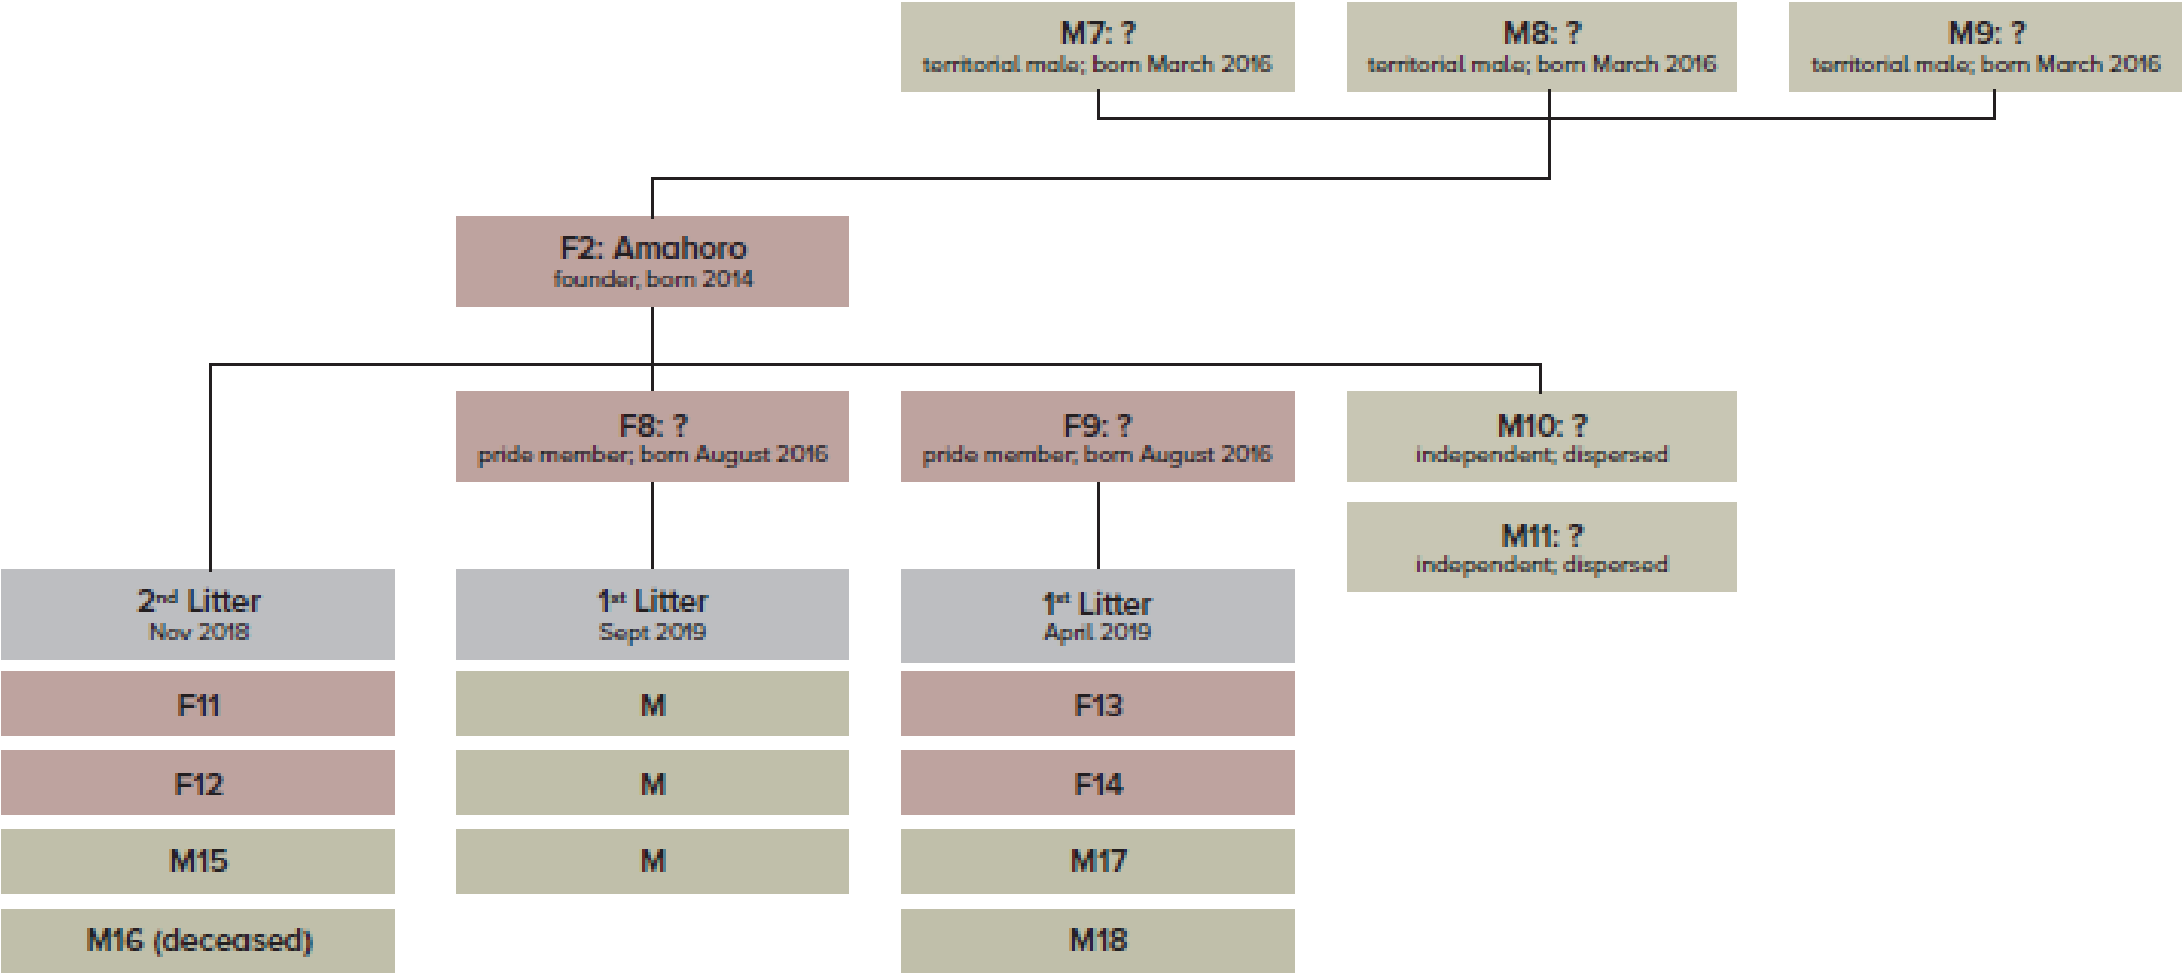

NEW LION RECORDED:

Additional Comments:

Amahoro Pride

Adult females: 3 related adult females (F2, F8, F9)
Offspring: Amahoro litter 2: 2 females, 2 males (1 male deceased)
F8 litter 1: 3 males
F9 litter 1: 2 females, 2 males
Territory: Magashi Peninsula
Associated males: Magashi Coalition (M7, M8, M9)

Jasiri - Female

From: Born in the Czech Republic. Youngest of all the relocated rhinos.

Offspring: None

At birth she was small and unable to drink from her mother, caretakers had to milk her mother and bottle-feed her until she was big enough to reach her mother's teats.

IDENTIFYING FEATURES:

- Anterior horn is short and has a split in it. It was removed by zoo vets due to her spitting it prior to relocation.
- Triangle notch on the bottom of the outer part of the right ear.
- Smallest of all the rhino, body condition is particularly good and rounded.
- Usually seen walking with Mandela.

Jasmina - Female

From: Born in Safari Park Dvůr Králové in the Czech Republic. Oldest female of the relocated animals.

Offspring: Conceived a calf at the zoo, which is still there for future breeding purposes.

IDENTIFYING FEATURES:

- Triangle notch, in the middle of the outer part of the left ear.
- Slender and long bodied animal, anterior (front) horn very pointed and sharp.
- Right ear tip has a bit of a fold at the top, hair much shorter than on the left ear.
- Either solitary or seen with Olmali.

Serengeti Migration Map

- 1** Ndutu Area known for the calving season from mid-December to March
- 2** Southern Serengeti heading to Western Corridor: April to June (crossing the Grumeti River)
- 3** Western Corridor heading to Northern Serengeti: June and July
- 4** Northern Serengeti to Masai Mara: July to October - millions of wildebeest and zebras cross the Mara River. Depending on weather conditions, they can migrate to Masai Mara and return to Serengeti twice during that particular period. The migration can be expected to move either way with no particular set direction.
- 5** Masai Mara to Northern Serengeti, Loliondo and Lobo: October to mid-December
